

GARS POTA MAY EVENT SATURDAY MAY 18, 2024

10:00 AM until ? AT BIDWELL SACRAMENTO RIVER STATE PARK

TALK IN FREQUENCY 146.580 CTCSS 167.9

REPEATER FREQUENCY 146.115 TN 123.0 K6LNK SYSTEM 36

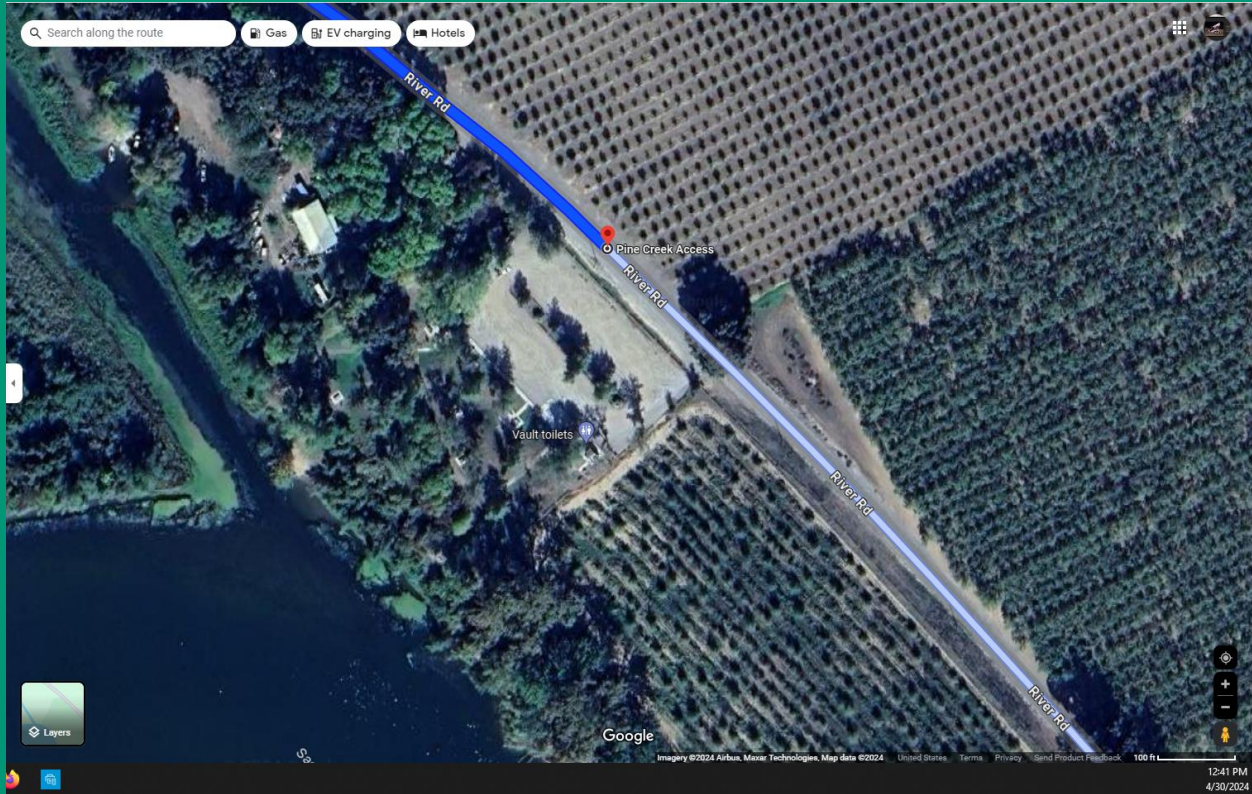

Bring your gear or just yourself to the MAY POTA Event we will likely be testing our new Band pass filters I would like to have 4-5 stations set up this day for testing. This facility is not as nice as the Colusa facilities but offers picnic tables and plenty of shade.

The weather should be warming up by this date so bring plenty to drink and sunscreen and maybe bug repellent.

Due to confusion during our last POTA event on the location we have implemented a talk in simplex frequency on the Ham adventure frequency of 146.580 CTCSS 167.9 this is a GARS specific tone for our outings moving forward. We will be monitoring CARLA System 36 local TN 123.0 as well for a wider coverage area. I would like to keep the chatter on CARLA to a minimum as it is a wide area system. Try to distinguish between link and local.

We are also hopeful to include a small fox hunt this day if the Microfox arrives in time for this event.

[LOCATION DIRECTIONS](#)

Above is a satellite picture from google maps of the Location which is the dirt lot on the west side of River Road this is the section of River Road closest to HWY 32.
